

Just call me aureus. This is my cousin, epidermidis.

You must be Ms. Staphylococcus!

Permanent.

Were you looking for something temporary or permanent?

I have the perfect place for you! This is a brand new titanium plate; all you need is your adhesives!

No worries! I brought my MSCRAMMs, and epidermidis has a biofilm ready to go.

Perfect! I'll let you two get settled, then!

You've developed a Staph infection with both epidermidis and aureus species. It seems to be centered on the metal plate we used to keep your ACL in place while it heals.
